

Baseline Benefits

The Financial Operating System for Healthcare.

Healthcare is the only major expense without one.

An app that connects your HSA, insurance, pharmacy, and bank, then finds what you're owed and the cheapest way to pay.

baselinebenefits.com

Healthcare runs on **paperwork**, not software.

Americans spend more on healthcare than almost anything else, yet manage it with none of the tools they expect for the rest of their money.

- Most people can't say what their HSA covers, so tax-free money sits unused.
- Same drug, same pharmacy: a \$29 copay when the cash price is \$12. Nobody tells you.
- Reimbursements go unfiled because the paperwork is miserable.
- Medical bills hide costly errors, and no tool checks them for you.

Prices illustrative; discount cash prices often beat copays (GoodRx).

Three shifts made this possible.

The tools to fix healthcare's money problem only recently came together.

AI

People expect apps to do the work for them now, not just show information.

Price transparency

New rules finally made healthcare pricing data usable.

Connected finance

Open banking and digital wallets let apps link your accounts and move money for you.

Baseline Benefits. The AI financial OS for healthcare.

It connects your HSA, insurance, pharmacy, and bank, then works in the background to find what's eligible, compare every price, file reimbursements, time your deductible, and forecast what's next.

Healthcare money decisions become **automatic**.

One platform. Five systems.

Unified Health Wallet

All your health money (HSA, FSA, cards) in one place.

Eligibility Engine

Knows what's covered or HSA-eligible, down to the item.

Pharmacy Optimization

Compares every price so you never overpay for a prescription.

Reimbursement Automation

Files the paperwork and recovers money you're owed.

AI Health CFO

Explains every move and plans for what's coming.

One prescription, handled.

- 1 Your doctor writes a prescription.
- 2 Baseline Benefits compares insurance, GoodRx, and cash in seconds.
- 3 **"Pay \$12 with GoodRx,"** or **"Use insurance, you're near your deductible."**
- 4 Filled, then **auto-reimbursed from your HSA** . No paperwork.

Illustrative example; eligibility and pricing vary by plan. Financial guidance only: a rules engine built on IRS Pub 502 makes the call, the AI explains it, and we never suggest changing a medication.

Everyone solves one piece. We connect them.

Each of these optimizes one number. The right call depends on four at once: today's price, your deductible position, the HSA tax break, and what you'll spend next. None of them can see all four.

GoodRx

price only

Insurer & HSA portals

no guidance

Budgeting apps

no healthcare context

Health apps

no financial layer

Baseline Benefits

connects all of it

Baseline Benefits is the **only one** connected to your prices, insurance, HSA, and bank.

Free for you. Paid by the money we move.

Free for the people who use it. We earn from pharmacies, merchants, and card rails, plus a cut of the money we recover, and none of it depends on employer or health-plan budgets.

- + Prescription discount transaction fees
- + Fees from merchants who accept HSA / FSA
- + Interchange + interest on HSA balances
- + Pharma copay & assistance programs
- + A cut of recovered reimbursements, earned only when you get paid
- + Employer & health-plan contracts (expansion)

Fees like these are **about 82%** of GoodRx revenue.

From HSA optimization to the layer under **every** healthcare payment.

We start with prescriptions and HSAs, then expand into the rest of healthcare spending.

- Medical-bill auditing: find the billing error, file the dispute.
- Employer and health-plan contracts: the same engine, sold to the people who carry the cost.
- Medicare and Medicaid guidance: the households hit hardest by out-of-pocket costs.

Built by someone who's **lived this.**

Christopher Cruttenden, founder. He has fought the HSA and benefits maze himself; that fight is the product. He grew up inside fintech (his grandfather and uncle founded Acorns, the app that made investing simple for everyday people) and has worked in health tech alongside his father.

Hiring next: payments, health benefits, and AI engineering.

Healthcare should work like modern finance.

Baseline Benefits finds the money your benefits already owe you.

Today: waitlist open at baselinebenefits.com. First build: the eligibility and reimbursement engine. Talking to early investors and partners now.
